Addressing Economic Constraints of Technology Adoption for Postharvest Practices and Rice Seed Storage in Bangladesh
Conducted by: Helen Keller International
CONSENT OF RESPONDENT

Good morning/afternoon. I am _____ from the Helen Keller International, Bangladesh. Together with the Kansas State University, we are conducting two rounds of survey combined with an intervention that will provide necessary information to carry out research in accordance with the Feed the Future Innovation Lab for the Reduction of Post-Harvest Loss (PHLIL). The USAID PHLIL is supporting researches that help promote the welfare of Bangladeshis; particularly, to improve agricultural technology, food consumption and nutrition of the people and women's status via promoting better post-harvest practices. Your household has been chosen by a random selection process.

We are inviting you to be a participant in this study. We value your opinion and there are no wrong answers to the questions we will be asking in the interview. We will use approximately 2.5 hours of your time to collect all the information. We will ask several questions on socio-economic characteristics and your agricultural production and storage practices. During the survey, we will also ask you to make a bid for a hermetic storage bag and you will be asked to pay the amount of your bid if you win in exchange for the bag. There will be no risk as a result of your participating in the study. Your participation in this research is completely voluntary. You are free to withdraw your consent and discontinue participation in this study at any time.

This study is conducted anonymously. You will only be identified through code numbers. Your identity will not be stored with other information we collect about you. Your responses will be assigned a code number, and the list connecting your name with this number will be kept secured and then will be destroyed once all the data has been collected and analyzed. The collected data without identifiers will be stored in public data repository and may will be used for future research.

Your participation will be highly appreciated. The answers you give will help provide better information to policy-makers, practitioners and program managers so that they can plan for better services that will respond to your needs.

The researcher read to me orally the consent form and explained to me its meaning. I agree to take part in this research. I understand that I am free to discontinue participation at any time if I so choose, and that the investigator will gladly answer any question that arise during the course of the research.
